**Daily Commentary**

The PBoC cut the Chinese central bank rate 108 bps overnight to 5.58%. This is the 4th cut since the beginning of September when their rates stood at 7.50%, and the largest single cut in 11 years for the bank.

As Scott described in the LP, KPMG has done the math and decided that a leveraged BCE deal just won't work in this environment. This should be a positive development for the bond holders, as they make their way back to A rated status. The bad news is, A rated doesn't mean the same as it did when this deal was announced... as we all know, credit has deteriorated significantly. Still, BCE should go back to being a big cash flow generator with more than adequate interest coverage.

This should also be negative for the Canadian dollar. The \$29 bln in financing was surely going to come in US\$ or possible EUR\$. Regardless, it would have to be swapped back to loonies to pay the shareholders. Now that bid is gone. The loonie is down about a penny this morning, although part of this weakness is certainly due to the general selling in the equity markets.

Lots of Data out in the US this morning ahead of the Thanksgiving holiday.

The data is mixed. **Durable Goods Orders** was nothing short of terrible, and last month was revised downwards. **PCE deflator** (the Fed's preferred measure of inflation) showed a big drop from September. The headline came in at 3.2% while the core stands at 2.1%

**Jobless Claims** still printed above 500k, but declined slightly from last week's 543,000.

All in all, we see the data as mixed and expect the market to continue trading on news.

Bonds are trading higher, but their gains have moderated since the release of the data. The C\$ has declined some more.
